Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-88, 106-109, 142-147, drawn to an equalizer, classified in class 375, subclass 229.
 - II. Claims 89-105, 110-141, drawn to data clock recovery, classified in class 375, subclass 371.
 - III. Claims 148-171, drawn to a receiver including differential amplifiers, classified in class 375, subclass 318.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are directed to related operations in a receiver. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Invention I refers to an equalizer in a receiver which generates samples on an input signal based on a threshold value and selects one of the samples to be used to generate an equalization signal. Invention II refers to a data clock recovery circuit which adjusts the phase of a clock signal according to the state of a sample of the input data signal. Invention III refers to a differential amplifier receiver including a plurality of differential amplifiers and resistive elements which draw currents through the resistive elements according to signal levels of the input signal.

Art Unit: 2634

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
